

Georgia ImageTrend Project

A Factsheet

The Insurance and Safety Fire Commissioners Office has been afforded the opportunity to provide to all registered fire departments in the state of Georgia the use of a new data management system through ImageTrend.

- This system is a complete fire RMS (Records Management System) that allows fire departments to go paperless for data collection and incident reporting.
- This secure web-based system provides for advanced fire operations including staff and equipment management at any time, from anywhere.
- This system is ideally suited for state and local-level administrative reporting data management, while providing local data submission and reporting capabilities as well.
- Fire Bridge is a simple, centralized data repository for all fire department data to seamlessly integrate NFIRS reports, inspection data, response plans and operational function data.
- Web-based NFIRS reports and fire inspection forms are designed to increase **efficiency and minimize errors by utilizing data entry shortcuts**. This will assist in creating uniformity in records.

- The user friendly reporting and data management capabilities reduce data entry time and accommodate complete and accurate fire reporting, anytime, anywhere.

Develop Response Plans

- Pre-planning
- Hydrants
- Inspection modules

Manage Investigations

- Enter and track investigation records
- Completing standard forms
- Adding photographs
- Additional documents associated with investigation
- Any investigation report entered into Fire Bridge can be associated with a NFIRS report allowing the user to quickly see important data related to specific occupant

Track Inventory & Maintenance

The inventory module allows the tracking and management of physical assets on a high-level or detailed basis.

Tracking

- Assign inventory to location
- Record product attributes
- Attach photos

Maintenance

- Record maintenance
- Schedule maintenance

Fire Inspections

- Easy to use forms
- Store building information
- Violation tracking
- Forms can be completed during inspection with us of a Tablet PC and Mobile Inspection client **(included)**
- Capture needed signatures on scene

Reports

- Turns fire related data into valuable information that is quickly discernible
- Authorized users can access all related data for viewing, tracking and reporting
- Integrates with CAD (Computer Aided Dispatch) systems/ this is provided at an additional cost to departments
